

Claims

1. A solar module comprising
- 5 a) at least one solar cell,
- b) a front side composed of transparent polyurethane, and
- c) a rear side.
2. The solar module of Claim 1 in which the rear side is composed of transparent polyurethane.
- 10 3. The solar module of Claim 1 in which the rear side is composed of plastic, glass or ceramic.
4. The solar module of Claim 1 in which the rear side is composed of opaque polyurethane.
5. The solar module of Claim 4 in which the opaque
- 15 polyurethane contains a filler.
6. The solar module of Claim 5 in which the filler is selected from the group consisting of chalk, glass platelets, silicates and combinations thereof.
7. The solar module of Claim 1 in which the front side has a
- 20 textured surface.
8. The solar module of Claim 1 in which the rear side is constructed in the form of cooling fins.
9. A process for producing the solar module of Claim 1 comprising applying polyurethane to the solar cells by a reaction injection
- 25 molding process, a casting process, an injection molding process or a combination thereof.
10. The process of Claim 9 in which the solar cells are secured to a rear side of the module before transparent polyurethane is injected or cast on the front side.
- 30 11. The process of Claim 9 in which the rear side is composed of a plastic film or a composite plastic film which has been thermoformed
